U.S. Citizen in Raleigh, NC

Education

B.S. in Human-Centered Design & Engineering from University of Washington — Graduated

Experience

Software Engineer at Nom Nom, Remote — Mar 2022 - Present

- Led technical planning and development for the launch of a new product by building new product pages and signup flows in TypeScript, React, HTML, and CSS, and modifying existing REST APIs and business logic in Python to streamline purchasing and increase sales.
- Refactored the self-cancellation experience across the frontend and backend using JavaScript, React, and Python to understand customer churn, inform retention efforts, and encourage acceptance of alternative offers.
- Launched a full website redesign using TypeScript, React, HTML, and CSS, collaborating with Product, Marketing, and external creative agencies and translating Figma designs to reinforce Nom Nom's position as a premium dog food brand.
- Used Google Cloud Platform to investigate application errors, run BigQuery queries, and access Datastore, while monitoring CircleCI builds and investigating failures to maintain application reliability and deliver features smoothly.
- Conducted UX research interviews with Customer Experience stakeholders to identify workflow pain points and inform requirements for an admin application redesign, ensuring proposed solutions addressed users' day-to-day needs.

Software Engineer at 100Devs, Remote — Mar 2021 - Mar 2022

- Completed software engineering training in JavaScript, React, HTML, and CSS, and collaborative development practices using Git and GitHub.
- Built Min to Win, a full-stack application using React and Node.js to help users discover Minute to Win It games through search and filtering, supported by a documented REST API for querying game data.

Web Developer & Designer at Shepherd Research Lab, Honolulu, HI — Mar 2019 - Aug 2021

- Built WordPress websites using custom HTML and CSS to promote lab services, recruit research study participants, and support collaborations around emerging AI initiatives.
- Led branding and creative direction for a research conference, collaborating with the conference organizer to bring the digital, print, and promotional materials to life, strengthening visibility and creating a cohesive attendee experience.

Selected Projects

Animal Crossing API

Solo Developer

- Built a REST API prototype for Animal Crossing data in TypeScript, React, HTML, and CSS to explore REST API design and data modeling, while providing a resource to allow other developers to build their own projects.

Reuben Sandwiches

Solo Designer & Developer

- Built a website using Astro's static site generation and Content Collections for structured content management with automated deployment to GitHub Pages to help users discover local Reuben sandwiches.
- Designed page layouts and reusable UI components in Figma, establishing typography, color palettes, and visual hierarchy before implementation to create a user-friendly experience.
